LINUX VFS

Linux Internals: Virtual File System (VFS), Inodes & Dentry Caches

Linux mein hard disk, mouse, keyboard aur network socket sab ek normal file kaise ban jaate hain? 📁 ⚡

1. User Space open() & read()

VFS har open file ke liye ek in-memory inode aur dentry structure allocate karke disk read ko fast cache karta hai.

```
# DENTRY LOOKUP
VFS हर open file के लिए एक in-memory inode
और dentry structure allocate करके disk
read को fast cache करता है।
```

2. Kernel VFS & Dentry Cache

Chahe data SSD block par ho ya network socket par, function pointer dispatch se kernel O(1) time mein execute karta hai.

```
# VTABLE DISPATCH
चाहे data SSD block पर हो या network socket
पर, function pointer dispatch से kernel
O(1) time में execute करता है।
```
