Day 3/90: Distributed Caching, Redis Cluster & Cache Stampede

Day 3 of 90 Days High-Scale System Design! 🏢⚡

1. 100k Concurrent Users

Pehla client database update karne ke liye short-lived distributed mutex lock acquire karta hai.

```
# MUTEX LOCK
पहला client database update करने के लिए
short-lived distributed mutex lock acquire
करता है।
```

2. Distributed Mutex Lock

Baaki sabhi incoming concurrent queries database hit karne ke bajaye slightly stale cached data serve karti hain.

```
# STALE SERVE
बाकी सभी incoming concurrent queries
database hit करने के बजाय slightly stale
cached data serve करती हैं।
```
