👑 CODERKING STUDIO

Official Technical Roadmaps & Architecture Guides

90-DAY MASTERCLASS

90 Days of Data Science & AI: Zero to Hero

Complete 90-day syllabus: Python foundations ➔ Linear Algebra & Tensors ➔ PyTorch ➔ LLM Fine-Tuning ➔ Agentic AI.

📊 Month 1: Core Foundations (Day 1-30)

- **Day 1-10:** Vector math, Tensors, Matrix Multiplication, Dot Products.
- **Day 11-20:** NumPy & Pandas data engineering pipelines.
- **Day 21-30:** Probability distributions, Bayes theorem, Gradient Descent.

🤖 Month 2: Deep Learning & PyTorch (Day 31-60)

- **Day 31-40:** Neural networks from scratch, Backpropagation.
- **Day 41-50:** PyTorch tensors, Custom datasets, CUDA GPU acceleration.
- **Day 51-60:** CNNs, RNNs, and Attention mechanisms.

🧠 Month 3: LLMs & Modern AI (Day 61-90)

- **Day 61-70:** Transformer architecture, Positional encodings, KV-Cache.
- **Day 71-80:** LoRA / QLoRA fine-tuning with Hugging Face.
- **Day 81-90:** Vector databases (Chroma/Milvus), RAG, and Autonomous Agents.

💻 Daily Practice Formula

Each day consists of 1 core concept + 20 lines of reproducible Python code:

```
import torch
t = torch.randn(1000, 1000, device="cud
a")
result = torch.matmul(t, t)
```
