👑 CODERKING STUDIO

Official Technical Roadmaps & Architecture Guides

90-DAY MASTERCLASS

90 Days of Ethical Hacking & Cybersecurity

Complete 90-day syllabus: Network reconnaissance ➔ Packet analysis ➔ Linux privilege escalation ➔ Binary exploitation.

🌐 Month 1: Network Recon (Day 1-30)

- **Day 1-10:** TCP/IP 3-way handshake, Packet sniffing with Wireshark.
- **Day 11-20:** Nmap scanning techniques, Service fingerprinting.
- **Day 21-30:** DNS enumeration, Subdomain takeovers, OSINT with Sherlock.

🛡️ Month 2: System Exploitation (Day 31-60)

- **Day 31-40:** Linux SUID binaries, PATH hijacking, sudo privesc.
- **Day 41-50:** Windows Active Directory, Kerberoasting, BloodHound.
- **Day 51-60:** Web application security (OWASP Top 10, SQLi, SSRF, XSS).

⚡ Month 3: Reverse Engineering (Day 61-90)

- **Day 61-70:** x86/ARM assembly, Ghidra decompilation, GDB debugging.
- **Day 71-80:** Buffer overflows, Stack smashing, Shellcode injection.
- **Day 81-90:** Malware evasion analysis, Rootkit detection, eBPF defense.

💻 Recommended Lab Setup

Build an isolated offline virtualization lab:

```
# VirtualBox / VMware Workstation
1. Kali Linux (Attacker Machine)
2. Metasploitable 2 / 3 (Target VM)
3. TryHackMe & HackTheBox VPN
```

Always practice legally inside authorized labs!
